Quarterly Market Review

First Quarter 2021

This report features world capital market performance and a timeline of events for the past quarter. It begins with a global overview, then features the returns of stock and bond asset classes in the US and international markets.

The report also illustrates the impact of globally diversified portfolios and features a quarterly topic.

Overview:

Fixed Income

First Quarter 2021 Index Returns

Interest rates generally increased in the US Treasury fixed income market during the first quarter. The yield on the 5-Year US Treasury note rose 56 basis points (bps), ending at 0.95%. The yield on the 10-Year T-note increased 81 bps to 1.74%. The 30-Year Treasury bond yield increased 75 bps to 2.39%.

On the short end of the curve, the 1-Month US Treasury bill yield decreased 3 bps to 0.05%, and the 1-Year T-bill yield fell 5 bps to 0.08%. The yield on the 2-Year US Treasury note climbed 6 bps to end at 0.15%.

In terms of total returns, short-term corporate bonds declined 0.59%. Intermediate-term corporate bonds declined 2.19%.

The total return for short-term municipal bonds was flat, while intermediate-term municipal bonds lost 0.52%. Revenue bonds outperformed general obligation bonds.

Impact of Diversification

First Quarter 2021

These portfolios illustrate the performance of different global stock/bond mixes and highlight the benefits of diversification. Mixes with larger allocations to stocks are considered riskier but have higher expected returns over time.

Ranked Returns (%)

Period Returns (%)

* Annualized

Asset Class	YTD	1 Year	3 Years*	5 Years*	10 Years*	10-Year STDEV ¹
100% Stocks	4.68	55.31	12.66	13.81	9.73	14.07

100% Treasury Bills	0.01	0.08	1.35	1.07	0.55	0.23

Growth of Wealth: The Relationship between Risk and Return

1.STDEV (standard deviation) is a measure of the variation or dispersion of a set of data points. Standard deviations are often used to quantify the historical return volatility of a security or portfolio.

Diversification does not eliminate the risk of market loss. Past performance is not a guarantee of future results. Indices are not available for direct investment. Index performance does not reflect expenses associated with the management of an actual portfolio. Asset allocations and the hypothetical index portfolio returns are for illustrative purposes only and do not represent actual performance. Global Stocks represented by MSCI All Country World Index (gross div.) and Treasury Bills represented by US One-Month Treasury Bills. Globally diversified allocations rebalanced monthly, no withdrawals. Data © MSCI 2021, all rights reserved. Treasury bills © Stocks, Bonds, Bills, and Inflation Yearbook™, Ibbotson Associates, Chicago (annually updated work by Roger G. Ibbotson and Rex A. Sinquefeld).

YOLO, Meme, and EMH: What's Your Investment Style?

First Quarter 2021

Marlena Lee, PhD
Global Head of Investment Solutions

You only live once! Social media investors have banded together on unconventional platforms to drive up the prices of a handful of “meme stocks,” seemingly without traditional evaluation of investing risks and rewards. They made headlines with their “short squeeze” of GameStop (GME), and, as they garner media attention, their tactics continue. While it's not the intended victim of the YOLO traders, will the efficient market hypothesis be a casualty of these events? The answer depends a lot on your definition of efficient markets. Perhaps long-term investors would be better served questioning the potential impact on their investment philosophy.

Fama (1970) defines the efficient market hypothesis (EMH) to be the simple statement that prices reflect all available information. The rub is that it doesn't say how investors should use this information. EMH is silent on the “correct” ways investors should use information and prices should be set. To be testable, EMH needs a companion model: a hypothesis for how markets and investors should behave. This leaves a lot of room for interpretation. Should asset prices be set by rational investors whose only concerns are systematic risk¹ and expected returns? It seems implausible to link recent meme-stock price movements to economic risks. Rather, they seem fueled by investor demand to be part of a social movement, hopes to strike it rich with a lucky stock pick, or plain old schadenfreude.

There is a vast ecosystem of investors, from individuals investing in their own accounts to governments and corporations who invest on behalf of thousands. Ask investors why they invest the way they do, and you'll likely get a range of goals and approaches just as diverse. It's this complex system that generates the demand for stocks.

Another complex system fuels the supply of stocks. Supply and demand meet at the market price. People may contend that the market is not always efficient, or rational, but the stock market is always in equilibrium. Every trade has two sides, with a seller for every buyer and a profit for every loss.

There are plenty of well-studied examples that show supply and demand at work. The huge increase in demand for stocks added to a well-tracked index often creates a run-up in the stock price. Some of this price increase can be temporary and reversed once the tremendous liquidity demands at index reconstitution² are met. Index reconstitution is just one example; instances of liquidity-driven price movements happen all the time. It is well documented that liquidity demands can produce temporary price movements.³ Investors may wonder if temporary price dislocations motivated by users of r/WallStreetBets differ from those caused by changes to an index. Lots of buying puts temporary upward pressure on prices, which later fall back to “fundamental value”—it sounds familiar. The more relevant observation may be that markets are complex systems well adapted to facilitate the supply and demand of numerous market participants.

There are numerous reasons people may be willing to hold different stocks at different expected returns. Can all those differences be explained by risks? Doubtful. To quote Professor Fama, “The point is not that markets are efficient. They're not. It's just a model.”⁴ EMH can be a very useful model to inform how investors should behave. We believe investing as if markets are efficient is a good philosophy for building long-term wealth. Trying to outguess markets might be a quick way to destroy wealth.

1. Systematic risk is the possibility of an investor experiencing losses due to factors that affect the overall performance of the financial markets in which he or she is involved.

2. Reconstitution involves the re-evaluation of a market index. The process involves sorting, adding, and removing stocks to ensure that the index reflects up-to-date market capitalization and style.

3. For example, see “Tesla's Charge Reveals Weak Points of Indexing” (Dimensional, 2021)

4. “Are markets efficient?” – Interview between Eugene Fama and Richard Thaler (June 30, 2016)

YOLO, Meme, and EMH

(continued from page 14)

It's true, you only live once. The good news is that investors can look to market prices, not internet fads, to pursue higher expected returns. Theoretical and empirical research indicate higher expected returns come from lower relative prices and higher future cash flows to investors. Long-run investors can be better served by using markets, rather than chatrooms, for information on expected returns.

Any reproduction of this information, in whole or in part, is prohibited. The information contained herein has been prepared solely for informational purposes and is not an offer to buy or sell or a solicitation of an offer to buy or sell any security or to participate in any trading strategy. If any offer of securities is made, it will be pursuant to a definitive investment management agreement prepared on behalf of Statherós which contains material information not contained herein and which supersedes this information in its entirety. Any decision to invest in the investments described herein should be made after reviewing such definitive investment management agreement, conducting such investigations as the investor deems necessary and consulting the investor’s own investment, legal, accounting and tax advisors in order to make an independent determination of the suitability and consequences of an investment. Any investment with Statherós involves significant risk, including a complete loss of capital and conflicts of interest.

All data presented herein is unaudited, subject to revision by Statherós, and is provided solely as a guide to current expectations. There can be no assurance that Statherós will achieve any targets or that there will be any return on capital. Historical returns are not predictive of future results.

Statherós and its affiliates do not provide tax advice. Accordingly, any discussion of tax matters contained herein (including any attachments) is not intended or written to be used, and cannot be used, in connection with the promotion, marketing or recommendation by anyone unaffiliated with Statherós of any of the matters addressed herein or for the purpose of avoiding tax-related penalties. This document is only made available to persons of a kind to whom may lawfully be promoted. All prospective investors are directed to read the applicable materials fully and to consult as appropriate with their professional advisors.

Research/Outlook Disclosure:

This document was produced by and the opinions expressed are those of Statherós as of the date of writing and are subject to change. This research is based on Statherós proprietary research and analysis of global markets and investing. The information and/or analysis contained in this material have been compiled or arrived at from sources believed to be reliable, however Statherós does not make any representation as to their accuracy or completeness and does not accept liability for any loss arising from the use hereof.

1. Some internally generated information may be considered theoretical in nature and is subject to inherent limitations associated therein.
2. There are no material changes to the conditions, objectives or investment strategies of the model portfolios for the period portrayed.
3. Any sectors or allocations referenced may or may not be represented in portfolios of clients of Statherós, and do not represent all of the securities purchased, sold or recommended for client accounts.
4. Due to differences in actual account allocations, account opening date, timing of cash flow in or out of the account, rebalancing frequency, and various other transaction-based or market factors, a client’s actual return may be materially different than those portrayed in the model results.

The reader should not assume that any investments in sectors and markets identified or described were or will be profitable. Investing entails risks, including possible loss of principal. The use of tools cannot guarantee performance. Past performance is no guarantee of future results. The information in this material may contain projections or other forward-looking statements regarding future events, targets or expectations, and is only current as of the date indicated. There is no assurance that such events or targets will be achieved, and may be significantly different than that shown here. The information in this material, including statements concerning financial market trends, is based on current market conditions, which will fluctuate and may be superseded by subsequent market events or for other reasons.

Market indexes are included in this report only as context reflecting general market results during the period. Statherós may trade in securities that are not represented by such market indexes and may have concentrations in a number of securities and in asset classes not included in such indexes. Accordingly, no representations are made that the performance or volatility of the model allocations will track or reflect any particular index. Market index performance calculations are gross of management and performance incentive fees typically associated with an investment account. Whenever administratively feasible the primary benchmark as selected by the fund manager is used.

Fund Selection and Modeled Performance Disclosure:

There are no warranties, expressed or implied, as to the accuracy, completeness, or results obtained from any information set forth in this report. Statherós will not be liable to you or anyone else for any loss or injury resulting directly or indirectly from the use of the information contained in this report, caused in whole or in part by its negligence in compiling, interpreting, reporting or delivering the content in this report. Statherós's officers, directors, employees and/or principals (collectively the "Related Persons") may have positions in and may, from time to time, make purchases or sales of the funds discussed or evaluated in this report. Statherós Financial Solutions, Inc. is an investment adviser registered with the U.S. Securities and Exchange Commission.

This report is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. This report is distributed for informational purposes only and should not be construed as investment advice or a recommendation to sell or buy any security or other investment, or undertake any investment strategy. It does not constitute a general or personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual investors.

Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of all of the original capital invested in a security discussed in this report may occur. Certain portfolios give rise to substantial risk and are not suitable for all investors.
